Contents

Contributed Papers

Balla, M.: Analytical study of the thermal shock problem of a half-space with various thermoelastic models . . . . . 73—92

Bufler, H.: The consistent liquid load operator of the uplifted strip . . . 209—216

Chandrasekharaiah, D. S., Murthy, H. N.: Temperature-rate-dependent thermoelastic interactions due to a line heat source . . . . . 1—12

Chaturani, P., Narasimman, S.: Numerical solution of a micropolar fluid flow between two rotating coaxial disks . . . . . 133—145

Güven, U.: The shrink fit with elastic-plastic hub exhibiting variable thickness . . . . . 65—72

Muhlhaus, H. B., Aifantis, E. C.: The influence of microstructure-induced gradients on the localization of deformation in viscoplastic materials . . 217—231

Prosnak, W. J.: On a complex potential suitable for construction of C-type grids . . . . . 147—165

Prosnak, W. J., Kosma, Z. J.: On a new method for numerical solution of the Navier-Stokes equations . . . . . 45—63

Rogerson, G. A.: Some dynamic properties of incompressible, transversely isotropic elastic media . . . . . 179—186

Rollins, D., Vajravelu, K.: Heat transfer in a second-order fluid over a continuous stretching surface . . . . . 167—178

Rosenberg, R. M.: Some remarks about time in Newtonian particle mechanics. . . . . 13—19

Sam Lawrence, P., Nageswara Rao, B.: Studies on laminar thin film flow along a vertical wall . . . . . 21—31

Tabarrok, B., Xiong, Y.: Some variational formulations for minimum surfaces. . . . . 33—43

Theocaris, P. S.: The elliptic paraboloid failure criterion for cellular solids and brittle foams . . . . . 93—121

Watanabe, T.: Forced and free mixed convection boundary layer flow with uniform suction or injection on a vertical flat plate . . . . . 123—132

Zhu, Z. Q., Ma, X.: An inverse integral 3D compressible boundary layer method and coupling with transonic inviscid solution . . . . . 187—208

Notes

Kolář, V.: On the critical points in the description of vortical flows. . . 241—245

Van der Giessen, E.: Some remarks on the analysis of large strain torsion-like problems . . . . . 233—239
